$$F = \frac{1}{4\pi \epsilon_0} \frac{q_1 q_2}{r^2}$$

]

where:

- (F) is the magnitude of the electrostatic force,
- (q_1, q_2) are the charges,
- (r) is the distance between charges,
- (ϵ_0) is the permittivity of free space.

Significance: Coulomb's law is the cornerstone for understanding interactions between charges, leading to the concept of electric fields.

2. Electric Field and Electric Field Lines

- Electric Field $(\vec{E})$: A vector field representing the force per unit charge at a point in space.

[

$$\vec{E} = \frac{\vec{F}}{q}$$

]

- Dipole Moment $(\vec{p})$:

[

$$\vec{p} = q \vec{d}$$

]

- It is a vector pointing from negative to positive charge.
- Measures the strength of the dipole.

Application: Analyzing the behavior of dipoles in external electric fields, calculating the torque and potential energy.

4. Electric Potential and Potential Difference

QuestionAnswer What is Coulomb's law in the context of electrostatics as explained in Resnick Halliday for Class 12? Coulomb's law states that the electrostatic force between two point charges is directly proportional to the product of their magnitudes and inversely proportional to the square of the distance between them, mathematically given by $F = k \frac{|q_1 q_2|}{r^2}$. How is electric field defined according to Resnick Halliday for Class 12 electrostatics? Electric field at a point is defined as the force experienced by a positive unit charge placed at that point, mathematically $E = F / q$, where F is the force on the charge q . What is the principle of superposition of electric fields as described in Resnick Halliday? The principle of superposition states that the net electric field due to multiple charges at a point is the vector sum of the electric fields due to each individual charge at that point. How is electric potential related to electric field in the context of Class 12 electrostatics in Resnick Halliday? Electric potential at a point is the work done in bringing a unit positive charge from infinity to that point without acceleration. The electric field is related to potential by $E = -dV/dr$ in the case of radial fields. What is the concept of electric potential energy for point charges as discussed in Resnick Halliday for Class 12? Electric potential energy is the work done in assembling a system of charges from infinity to their positions, given by $U = k \frac{q_1 q_2}{r}$ for two point charges separated by distance r . Explain the concept of electric dipole moment as explained in Resnick Halliday for Class 12 electrostatics. An electric dipole moment is a vector quantity defined as $p = q d$, where q is the magnitude of the charge and d is the vector distance between the charges, representing the strength and orientation of the dipole. What is the significance of electric flux in electrostatics as per Resnick Halliday for Class 12? Electric flux through a surface is the total number of electric field lines passing through that surface, mathematically given by $\Phi = E \cdot A \cdot \cos\theta$, and it helps in understanding electric field distribution. State Gauss's law as described in Resnick Halliday for Class 12 electrostatics. Gauss's law states that the total electric flux through a closed surface is equal to $1/\epsilon_0$ times the net charge enclosed within the surface, mathematically $\Phi = Q_{enc} / \epsilon_0$. How does Resnick Halliday explain the concept of conductors in electrostatics? Resnick Halliday explains that conductors are materials in which electric charges are free to move, and in electrostatic equilibrium, the charges reside on the surface, with the electric field inside being zero. What are the boundary conditions for electric fields at the surface of a conductor as per Resnick Halliday? At the surface of a conductor, the electric field just outside is perpendicular to the surface, and its magnitude is σ / ϵ_0 , where σ is the surface charge density; inside the conductor, the electric field is zero.
