' Perform actions, e.g., display a message

MsgBox "Hello from CATIA VBA!"

End Sub
```

...

This template can be expanded to automate complex tasks.

## Core Concepts and Techniques in CATIA VBA

### Accessing CATIA Objects

At the heart of CATIA VBA scripting is understanding how to access and manipulate objects within the application. The primary object is ``CATIA``, which represents the application itself. From there, you navigate to documents, products, parts, features, and parameters.

- `ActiveDocument`: Refers to the currently open document, such as a product or part.
- `Products and Parts`: Use ``ActiveDocument.Product`` or ``ActiveDocument.Part`` to access the geometry.
- `Selections`: You can select objects within CATIA to manipulate or analyze.

### Common Operations in VBA

- `Creating and Modifying Geometry`: Automate the creation of points, lines, surfaces, and features.
- `Parameter Management`: Read or update parameters within parts or assemblies.
- `File Operations`: Save, close, or export documents via scripts.
- `Iterating through Collections`: Loop through features, bodies, or parameters.

### Example: Extracting Parameters from a Part

```
``vba
```

```
Sub GetParameterValue()
```

```
Dim partDoc As PartDocument
```

```
Dim part As Part
```

```
Dim parameters As Parameters
```

```
Dim param As Parameter
```

```
Set partDoc = CATIA.ActiveDocument

Set part = partDoc.Part

Set parameters = part.Parameters

For Each param In parameters

Debug.Print param.Name & ": " & param.ValueAsString

Next

End Sub

'''
```

This script lists all parameters in the active part document in the Immediate window.

' Create a new sketch on XY plane

Set sketch = sketches.Add(part.OriginElements.PlaneXY)

Set factory = sketch.OpenEdition()

' Draw rectangle

factory.CreateLine 0, 0, 50, 0

factory.CreateLine 50, 0, 50, 30

factory.CreateLine 50, 30, 0, 30

factory.CreateLine 0, 30, 0, 0

sketch.CloseEdition

' Pad (extrude) the rectangle

```
Set pad = part.ShapeFactory.AddNewPad(sketch, 20)
```

```
part.Update
```

```
